Featuring

The New Giant Jersey Gem Viola

(OUR OWN INTRODUCTION)

A wonderful new seedling from Jersey Gem, the stem is longer, the flower, a beautiful rich shade of purple, is larger and more perfectly formed. In the hot weather, the past summer, THE NEW GIANT JERSEY GEM bloomed continuously when all other Violas stopped.

This plant of dwarf, compact habit, grows in any soil with plenty of sun and is absolutely free of the sprawly habit, which is characteristic of the old Jersey Gem plants.

Washington, D. C.,

Dear Sirs:

May we present you our Nursery Price List
for the year 1934.

We honestly believe you will find our stock
very reasonably priced and of the finest quality.
A large variety of common and unusual plants would
make your visit to our Nurseries well worth while.

The superintendent will show you every courtesy
and gladly explain about any of the plants in which
you may be interested.

In conjunction with our Nursery we operate an
up to date Landscape Department.

A call from you would have our immediate attention.

Sincerely yours,

MENDERTH

for HUNGRY SOIL

MENDERTH restores to your soil the vital mineral salts—bland, non-burning, pure, natural, primal earth minerals, finely powdered.

MENDERTH will rebuild your soil and make it clean, healthy and productive, overcoming many plant troubles.

MENDERTH has qualities all its own, which produce different and better final results.

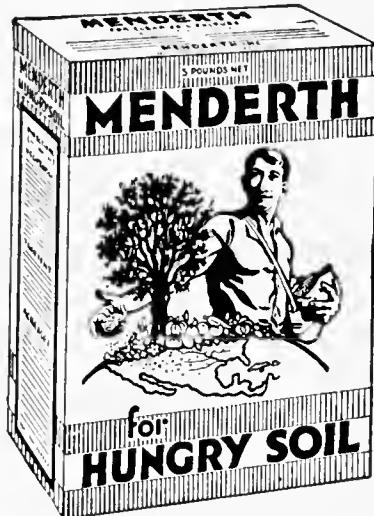

A PRODUCT OF

MENDERTH, Inc.

126 STATE STREET

BOSTON, MASS.

Write for Booklet

for CLEAN SOIL CULTURE

MENDERTH is a Natural Remineralizing Material, clean and odorless. Menderth does not burn the tenderest grass or foliage. It aids Nature in producing HEALTH GIVING FOOD STUFFS, Flowers of greater beauty, Finer Lawns, Trees and Shrubs. Menderth keeps Golf Course grasses in a natural, healthy condition.

MENDERTH WORKS IN HARMONY WITH NATURE

UNIQUE most plant foods, MENDERTH may be applied to the plant directly, without burning, or hurting the tenderest foliage. It is not only a soil restorer but can be used also for dusting on foliage and around the stalks and roots of growing plants. It should be dusted on and under the leaves when the plants are dry, and when the buds are maturing.

MENDERTH is not sold as an Insecticide, but a customer says:

"During the four years that I used your plant food in my garden, I did not see a cut-worm or corn borer."

And for potted plants another customer says:

"I put some MENDERTH on a potted house plant in my room and the next morning the window was covered with bugs that had left the plant. More than one hundred were to be seen and I swept them out the window."

HARDY PERENNIALS AND ROCK PLANTS FERNS AND GRASSES

Perennials comprise most of the best flowers as well as the foundation of any well planned garden. They exist in infinite varieties, sizes, colors and seasonable bloom.

The material we grow is strong field grown stock, with the exception of some varieties which transplant better by being grown in pots.

We offer perennials in quantities of three instead of singly, as we believe generally speaking it isn't practical to get a satisfactory garden effect by using one plant of a kind. Please remember that four plants or more of one variety will be priced at the ten rate and that twenty-five or more of one kind will be entitled to the hundred rate when such rate is given.

Plants marked with (r) are particularly adapted to the Rock Garden.
